Great starts depend on early and consistent feed intake. Use Purina® UltraCare® starter mix to create high-quality post-weaning diets without having to inventory multiple high-cost ingredients.

This supplement has a 100-pound inclusion rate and delivers the following ingredients to support pigs during weaning:

- Intake-enhancing technology**
to increase palatability and help create robust eaters
- Gut-optimizing technology**
to support gut health and digestive efficiency
- Yucca shidigera**
to support intestinal wellness and reduce ammonia levels in the barn environment
- Yeast probiotic**
to support immune system development and a balanced microbiome

Purina® UltraCare® starter mix is formulated to support optimal growth, providing pigs with the nutrients needed in the mid-to-late nursery phase.

Consistent feed intake supports immune system development during the weaning transition period, a time when pigs are exposed to multiple stressors and are particularly vulnerable to disease. **A healthy, well-developed gut functions as a barrier to disease** in the nursery and in subsequent production phases.

Robust feed intake is crucial to optimal growth post-weaning. End-of-nursery weights are a strong predictor of finishing weights. Research at the Purina Animal Nutrition Center indicates that every **1-pound difference at day 32 post-weaning correlates to a nearly 2.1-pound heavier pig at finishing.**¹
